

# AMD-2040 Nasopharyngoscope

***The AMD-2040 Nasopharyngoscope is designed for examination of the upper airway from the nasal passage to the vocal cords.***

## **Features**

- An internal insertion tube strain relief that increases the working length of the Nasopharyngoscope, while still providing protection of the upper section of the insertion tube
- The AMD-2040 connects to the AMD-400s and AMD-500 Camera & Illumination System. Also requires the AMD-2451 23mm Coupler.

## **Specifications**

- Outer Diameter: 3.8mm
- Depth of Field: 5mm-Infinite
- Working Length: 25mm
- Tip deflection: 125° up/down
- Field of View: Wide angle

## **Insertion Tube:**

- Depth Markers: Depth marks are located at 10cm and 20cm from the distal tip of the insertion tube
- Bending Section: The bending section deflects up and down when the articulation lever is rotated
- Distal Tip: The termination of the image fiber bundle (at the objective lens) & the illumination fiber bundles (light guides)

## **Control Body:**

- Eyepiece: Allows the user to connect to the AMD-400s and AMD-500 Camera and Illumination System
- Focus Ring: The focus ring adjusts the image to the user's eyesight
